

## Continuous monitoring and proactive remediation of compromised email accounts

### For Microsoft 365

#### Don't sacrifice security in the pursuit of greater productivity.

**Microsoft 365 Security Audit** continuously analyzes your mailbox settings to identify vulnerabilities and determine whether an email account may be compromised. That includes unauthorized mailbox forwarding rules, excessive administrator permissions, and more. Further, it can mitigate or remediate most issues without administrator intervention.

#### FEATURES:

- Unparalleled insight into Microsoft 365 environment and security deficiencies
- Continuous monitoring of compromised email account activity
- Strong password and authentication policy analysis and recommendations
- Immediate threat mitigation such as user deactivation
- Recommended remediation steps and justification
- Intuitive severity classifications
- Enforces principles of least privilege
- Policy management recommendations
- Available on any Office 365 tenant
- Simple, recurring report scheduling
- Export information in multiple formats
- Phenomenal Care support

#### BENEFITS:

- ✓ Enhances security posture by mitigating the threat of email account compromise
- ✓ Empowers administrators to focus on true threats and reduce false positives
- ✓ Simple to manage and support with Secure Cloud

*90% of threats start with email* Verizon

*Insider threats have been on the rise for the past four years* – Verizon

#### WHY NOW?

Productivity tools are essential for modern businesses, but also have security liabilities that can be difficult to identify. While the productivity advantages of Microsoft 365 are well known, many of the security liabilities and weaknesses are not. By bringing the Microsoft 365 Security Audit into a business environment, we arm administrators with granular awareness that helps to identify and patch security holes. This allows administrators to focus on advancing the organization's goals and trust that their mailbox is secure.

#### WHY MICROSOFT 365 SECURITY AUDIT?

The Microsoft 365 Security Audit is specifically designed to shield your business from business email compromise (BEC)—one of the fastest growing threats businesses face today. The audit assesses key configurations of Microsoft tenants and provides clear indicators for remediation. It also provides granular information that is difficult and time consuming to obtain in the Microsoft portal, but is invaluable for administrators. Plus, as an integral part of Secure Cloud, the Microsoft 365 Security Audit works seamlessly with other security, compliance, and productivity services in our Secure Suite, resulting in a fully-integrated and optimized platform that allows our partners and customers to unlock greater opportunities with a secure, modern workplace.

AppRiver has completed 10,000+ successful Office 365 migrations and applies the knowledge of 20 years partnering with Microsoft to defend against sophisticated threat actors.

#1 provider of Office 365 in North America, second only to Microsoft
